Professional Summary

Senior AI/ML Engineer building and shipping production LLM applications, AI agents, RAG systems, evaluation workflows, and Python backend platforms. Architected AIRA, an enterprise AI recruiting platform for semantic candidate search, automated resume evaluation, structured scoring, and recruitment decision support. Experienced with Python, FastAPI, OpenAI, Claude, LangChain, LlamaIndex, PostgreSQL, pgvector, Redis, Docker, AWS, and Azure, with strong focus on agent orchestration, tool calling, stateful workflows, structured outputs, model evaluation, multi-tenant architecture, and production reliability.

Skills

AI & LLM Engineering: LLMs, AI Agents, RAG, LangChain, LlamaIndex, OpenAI API, Claude API, Azure OpenAI, Tool Calling, Agent Orchestration, Prompt Engineering, Structured Outputs, Guardrails, Embeddings, Semantic Search

Backend Engineering: Python, FastAPI, Flask, Pydantic, SQLAlchemy, Async Processing, REST APIs, OAuth2/OIDC, JWT, Webhooks, Microservices

AI Evaluation: LLM Evaluation, Agent Evaluation, Model Evaluation, Rubric-Based Evaluation, Error Analysis, Output Validation, Prompt Testing, Retrieval Evaluation

Data & Retrieval: PostgreSQL, pgvector, Redis, Qdrant, SQL, Pandas, NumPy, Scikit-learn, Vector Databases

Cloud & DevOps: AWS, Azure, Azure AI Foundry, Azure App Service, Docker, Docker Compose, Kubernetes, GitHub Actions, CI/CD

Professional Experience

Ha-Shem Limited, Senior AI/ML Engineer

Sep 2025 – Present

- Architect and own production AI platforms spanning LLM agents, RAG, semantic retrieval, evaluation systems, and multi-tenant Python services using FastAPI, PostgreSQL/pgvector, Redis, OpenAI, Claude, Azure AI, and Docker.
- Led development of AIRA, an enterprise AI recruiting platform combining semantic candidate retrieval, automated resume analysis, structured candidate scoring, PII-blind evaluation, and AI-assisted hiring workflows.
- Designed stateful agent architecture with scoped tool permissions, deterministic transitions, Pydantic contracts, structured outputs, validation layers, and prompt guardrails to improve reliability in multi-step AI workflows.
- Engineered multi-tenant backend services with API-key authentication, OAuth2/JWT, asynchronous processing, Redis caching, rate limiting, webhook delivery, retry logic, and idempotency controls.
- Built hybrid evaluation pipelines combining deterministic rules, embeddings, semantic retrieval, and LLM reasoning to balance quality, latency, reliability, and inference cost.
- Drive AI features from experimentation through production deployment while collaborating across product, engineering, security, and business requirements.

SAIL Innovation Lab, Data Science & AI Engineer

Mar 2025 – Sep 2025

- Built predictive machine-learning systems using Python, Pandas, NumPy, Scikit-learn, and NLP, including models reaching approximately 89% predictive accuracy.
- Developed automated data and ML workflows supporting experimentation, validation, reporting, and business decision-making.
- Conducted feature engineering, model validation, error analysis, and iterative experimentation to improve model performance and reliability.

Outamation, AI Workflow Automation Extern

May 2025

- Designed 200+ LLM prompt workflows for mortgage-document classification, document understanding, structured extraction, and downstream automation.
- Built RAG-based document retrieval and contextual reasoning workflows with LlamaIndex, achieving approximately 95% structured extraction accuracy through validation pipelines.

AfterQuery Experts, AI Model Training Specialist

May 2025 – Aug 2026

- Evaluated frontier LLM outputs across coding, financial reasoning, analytical reasoning, and instruction-following tasks for technical correctness, hallucinations, relevance, and reasoning quality.
- Produced structured rubric-based feedback and evaluation datasets supporting model training, alignment, quality assurance, and identification of model failure modes.

XTAMALIY Limited, IT & Digital Operations Manager

2017 – Feb 2025

- Led IT operations, digital transformation, business automation, and data initiatives across multiple business functions.
- Built Python and Pandas automation for multi-source data processing, validation, reporting, and customer-retention analytics, improving the consistency and availability of operational data.

Selected Production Systems

AIRA, Enterprise AI Recruiting Platform

aira.havis360.com

- Built an AI-powered recruiting platform using Python, FastAPI, PostgreSQL, pgvector, OpenAI, and Claude for resume analysis, candidate ranking, semantic retrieval, automated evaluation, and recruitment decision support.
- Implemented embedding-based candidate retrieval, PII-blind evaluation, structured scoring, multi-tenant APIs, secure API keys, configurable workflows, and webhook integrations.
- Combined deterministic business rules, embeddings, and LLM reasoning with schema and output validation to improve reproducibility, reliability, and decision quality.

Spidify, AI-Powered KYC & Identity Verification Platform

havisspidify.com

- Built a production identity-verification platform integrating OCR, Azure Document Intelligence, face/liveness verification, compliance screening, and AI-assisted decision workflows.
- Designed a state-machine workflow spanning OTP verification, document collection, screening, selfie verification, liveness checks, and completion.
- Implemented Pydantic validation, HMAC-signed webhooks, retry/idempotency controls, rate limiting, PII redaction, audit logging, and multi-tenant authentication.

Diogenes the Dog, AI Lead Generation & Outreach Platform

2025 – 2026

- Built an AI-assisted lead-generation platform using Python, FastAPI, Next.js, LLM workflows, Google Maps/SerpAPI, Twenty CRM, Gmail OAuth2, and n8n.
- Designed a structured validation agent that classified prospects as Pass, Review, or Reject and scored lead suitability from 0–100 using business rules and AI-assisted reasoning.
- Automated prospect discovery, enrichment, qualification, CRM ingestion, outreach, and follow-up workflows across multiple UK cities.

For the Creators, Find Your Fit Maternity Sizing Widget

forthecreators.co

- Built and deployed a production Shopify sizing widget using JavaScript, Liquid, rule-based recommendation logic, and supporting admin controls for a live maternity-fashion storefront.
- Designed personalized size recommendations using the shopper's usual clothing size and journey stage, including Not Pregnant, 1st Trimester, 2nd Trimester, 3rd Trimester, and Postpartum.
- Integrated the widget into product-detail pages with configurable sizing rules, product eligibility controls, and product-level exclusions.

Certifications

- AWS Certified Cloud Practitioner
- Microsoft Certified: Azure AI Fundamentals
- Kubernetes and Cloud Native Associate (KCNA)

Education

Federal University of Technology, Minna, Minna, Nigeria

B.Tech Physics/Electronics

Nexford University

Data Science for Decision Making

ExploreAI Academy

Data Analytics Nanodegree, Black Belt – Distinction
